

Provisioning

Making a server ready for operation, including hardware, OS, system services, and network connectivity

Deployment

Automatically deploying and upgrading applications on a server

Orchestration

Performing coordinated operations
across multiple systems

Configuration management

Management of change control for system configuration after initial provision; maintaining and upgrading the application and application dependencies

Imperative/procedural

Commands necessary to produce a desired state are defined and executed.

Declarative/functional

A desired state is defined, relying on the tool to configure a system to match that state.

Idempotent

The ability to execute repeatedly,
resulting in the same outcome

Self service

The ability for an end user to initiate a process without having to go through other people

```
# Recipe:: default

include_recipe "build-essential"
include_recipe "apt"
include_recipe "git"

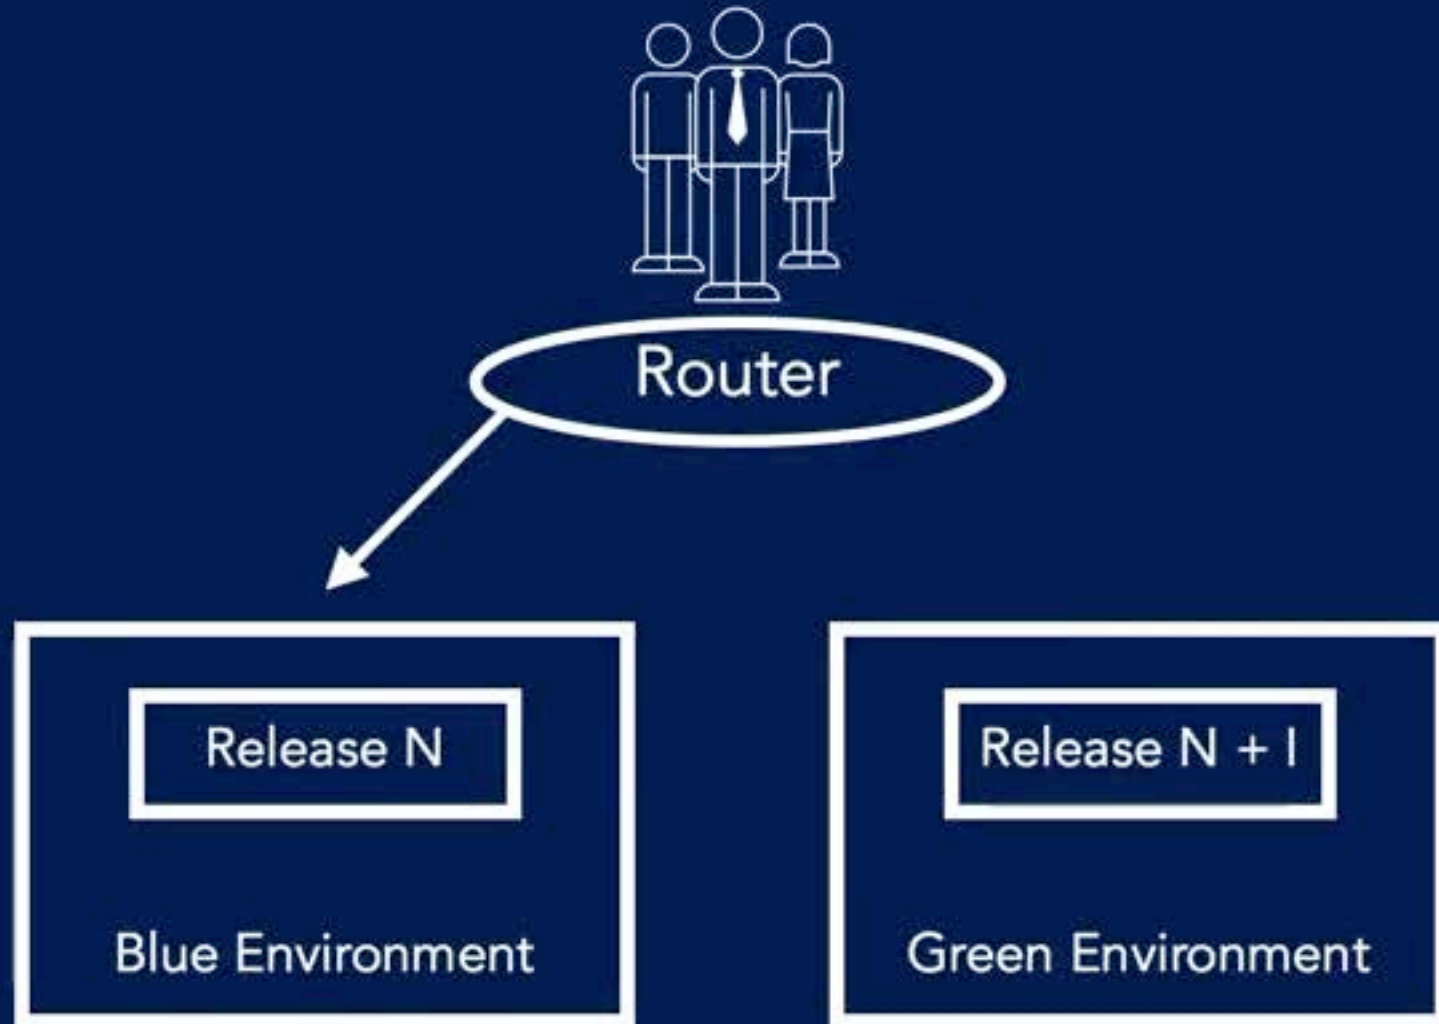

# install distro packages for building gems
['ruby1.9.1-dev', 'libxml2', 'libxml2-dev',
'libxslt-dev'].each do |pkg|
  package pkg do
    action :install
  end
end
```

Management

FEATURED APPS See all

- Resource group**
Manage and deploy resources in an application together
- Backup and Site Recovery (OMS)**
A backup and disaster recovery solution to safeguard applications
- Automation**
Automate the management of your cloud and on-premises resources
- Scheduler**
Run jobs on simple or complex recurring schedules
- Key Vault**
Enhance data protection and compliance
- Log Analytics (OMS)**
Collect, search and visualize machine data from on-premises and cloud
- Veeam Cloud Connect for Service Providers**
Cloud Connect Backup lets service providers quickly stand up multi-

```
resource "digitalocean_droplet" "web" {  
  name = "tf-web"  
  size = "512mb"  
  image = "centos-5-8-x32"  
  region = "sfo1"  
}  
  
resource "dnsimple_record" "hello" {  
  domain = "example.com"  
  name = "test"  
  value = "${digitalocean_droplet.web.ipv4_address}"  
  type = "A"  
}
